

October 10, 2017

Dear Colleagues, Partners, and Customers,

As you may know, Air Monitor is located in Santa Rosa, California; the center of the Tubbs wildfire. Many areas of the community have been devastated by the fire. The fire is still active, but the firefighters are continuing to make progress. To date, we are thankful to report that there are no injuries to any of our staff. We have learned that one employee has lost his home and possessions to the fire. We are gathering more information on this and will provide an update as more information becomes available.

Fortunately, our facility; which is in an evacuation zone, was not impacted by the fire. At this time, we expect to resume operations as soon as the area is safe to travel to and from and power is restored. We believe this will be possible by Friday of this week.

We have transferred the [1-800-Air-Flow](tel:1-800-Air-Flow) telephone number to ring at our Largo, Florida facility. The staff in Florida are well trained on the products and can assist with technical support, application engineering, quoting, and order administration. We are also monitoring and responding to "contact us" e-mails from [www.airmonitor.com](http://www.airmonitor.com).

We will provide future updates as new information becomes available.

Sincerely,

A handwritten signature in black ink, appearing to read "John Norris".
